RIP MANAGER

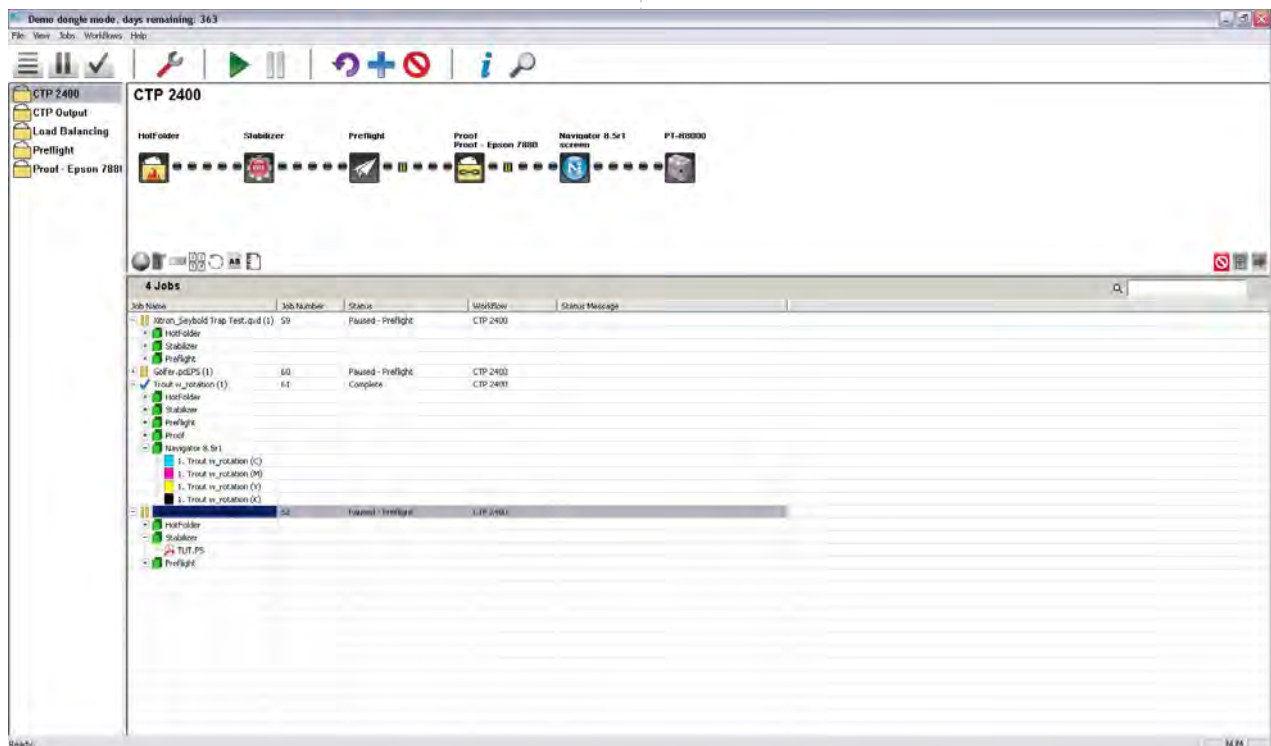

- › **Easy-to-use**
Desktop control of major RIP functionality
- › **Integrated soft proofing**
Preview jobs from any desktop
- › **Job Tracking**
Track job progress throughout the system
- › **Modular**
Start with the features you need
- › **Expandable**
Add features and capabilities as needs dictate
- › **Flexible**
Protect existing RIP investment

Navigator RIP Manager helps increase productivity, manage your workflow, and reduce costs.

With an easy-to-use graphical user interface, Navigator RIP Manager allows operators to manage and control jobs from virtually any prepress workstation. It allows operators to design and store specific workflow sequences and reduces the opportunity for human error.

Navigator RIP Manager's PDF option allows for greater control over PDF file management and creates industry standard PDFs as the intermediate file format.

Your investment in Navigator RIP Manager includes not only the software, but the expertise to make the solution successful in your business. Xitron partners are trained and certified to support Navigator RIP Manager.

Extensive Job Management

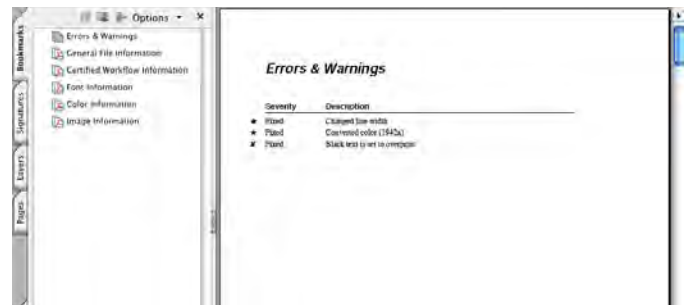

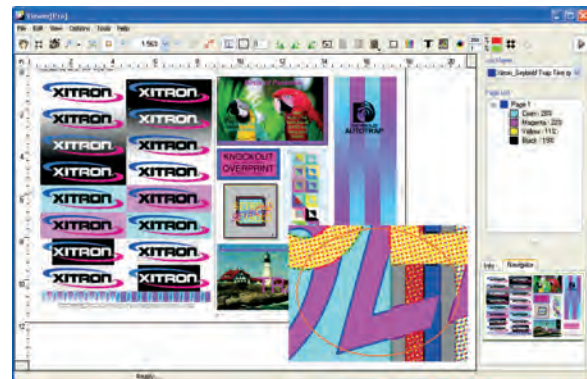

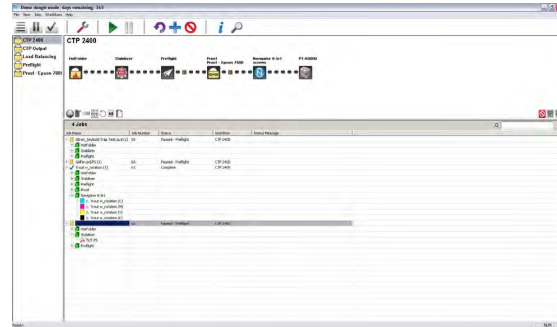

RIP Manager's graphical user interface allows an operator to manage and control jobs from virtually any prepress workstation, unlike legacy systems with a single point of control. Job tracking can be monitored on any workstation throughout the production process. Specific workflow sequences can be designated and stored, greatly reducing the opportunity for human error. Control of commonly used Page Setup features reduces the number of individual Page Setups required.

Integrated Viewer

Navigator RIP Manager includes an integrated Viewer which enables prepress operators to softproof jobs at their workstations at any stage throughout the production process. Unlike some viewers, the RIP Manager Viewer does not stop or delay your production. An operator may view a job at anytime without having to disable outputs or wait for another operator to complete a task. The Viewer provides job views from 3% - 800% dependent on the overall job. Black traps can be viewed as gray to allow the operator to check the accuracy of traps prior to final output.

PDFTools Option

Navigator RIP Manager's PDF option provides for greater control over PDFs enabling you to become an integral player as new standards develop and are implemented throughout the industry. Utilizing the PDFTools, you can automatically create PDFs from incoming PostScript files and then Preflight the PDFs using the integrated Preflight capability to fix many common job problems. Preflight reports can be automatically generated to alert the operator to any problems with the file such as low resolution images.
